Other Trademarks

Microsoft, Excel, Visual C++, SQL Server and Visual Studio are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries. Adobe, Reader, and Acrobat are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries. OPC is either a registered trademark or trademark of OPC Foundation in the United States and/or other countries. Kepware is either a registered trademark or trademark of Kepware Technologies Corporation in the United States and/or other countries. All other trademarks are the property of their respective holders and are hereby acknowledged.

Warranty

This product is warranted in accordance with the product license. The product's performance may be affected by system configuration, the application being performed, operator control, maintenance, and other related factors. Rockwell Automation is not responsible for these intervening factors. The instructions in this document do not cover all the details or variations in the equipment, procedure, or process described, nor do they provide directions for meeting every possible contingency during installation, operation, or maintenance. This product's implementation may vary among users.

This document is current as of the time of release of the product; however, the accompanying software may have changed since the release. Rockwell Automation, Inc. reserves the right to change any information contained in this document or the software at any time without prior notice. It is your responsibility to obtain the most current information available from Rockwell when installing or using this product.

Environmental compliance

Rockwell Automation maintains current product environmental information on its website at http://www.rockwellautomation.com/rockwellautomation/about-us/sustainability-ethics/product-environmental-compliance.page

Support Information

To access Live Chat

From Rockwell Automation Support, click **Get Support Now** and use **Live Chat** which is available without requiring a TechConnect Support contract for Connected Components Workbench and Micro800 controllers. Member login is required. Go to: http://www.rockwellautomation.com to register.

Additional support options are available from the **Help** menu in Connected Components Workbench (CCW).

New Features and Enhancements for Release 9.01

This release is a minor release for release 9.00 and contains minor enhancements and resolved anomalies. This release note only documents the minor changes for release 9.01 for the localized language release. See Connected Components Workbench 9.0 release notes.

Workbench - Local Languages

All local languages are now simplified to a single ECPFIGS installation package for English, Chinese, Portuguese, French, Italian, German, and Spanish. Connected Components Workbench can switch languages without uninstalling and reinstalling. See Installing Connected Components Workbench.

The ECPFGIS installation package only includes the English hardware user manuals. The CPFIGS (non-English) user manuals are included in a separate User Manual installation package. The User Manual install package (CPFIGS) is available for download. To download the User Manual package, go to: Product Compatibility & Download Center and select Connected Components Workbench version 9.01.00.

Installation and Upgrades

Installing Connected Components Workbench

Some Microsoft components may require a restart before the full Connected Components Workbench (CCW) installation is complete. If CCW does not install completely, restart the computer and CCW will automatically continue installing.

To install Connected Components Workbench follow these steps.

1. Download the current version of Connected Components Workbench (Standard or Developer Edition).

2. Launch Setup.exe.
   Tip: Choose the language used during setup. By default the language is the same as the operating system.

3. To install additional languages, select the language check box.

4. By default all products are selected and install with CCW. To remove a product or language for the current install, clear the check box.

5. Follow the prompts in the Connected Workbench Setup window.
   Tip: Connected Components Workbench determines the components to upgrade and install. If there is a reboot requirement, reboot the operating system so the install can complete successfully.

6. (optional) If installing the Developer Edition, enter your serial number into the installer when prompted.

7. When the installation is complete, click **Finish**.

Changing Workbench Language and Adding Devices

During installation, ensure that all desired languages and device support are installed. If an additional language or device is required after the initial install, execute Setup.exe again, and select only the check boxes for the additional languages or devices.

To switch the language in Connected Components Workbench after installation follow these steps.

1. On the Tools menu, select **Options** > **Environment** > **Language**, then select the desired language and click **OK**.

2. Close, then relaunch Connected Components Workbench to complete the language switch.

To hide the English help content when using Connected Components Workbench with a different language follow these steps.

1. On the Help menu, click **View Help** to open Help Viewer 2.1.

2. In the Help Viewer, click the **Viewer Options** icon or press **Ctrl+O**.

3. In the **Viewer Options** dialog box, clear the check box labeled **Include English Content in all navigation tabs and F1 requests.**

4. Click **OK** to close the **Viewer Options** dialog box, then close and relaunch Help Viewer 2.1.

Resolved Anomalies

This section identifies anomalies that have been resolved since the last release of Connected Components Workbench.

Resolved controller anomalies

Issues when performing online Micro800 actions, especially with Micro810 and Windows 8/8.1. [APBC00022297, APBC00027008, APBC00025555, APBC00027272]

Resolved drive anomalies

In the Add Device selector, adding an online drive using the Select Existing Device dialog box creates the wrong drive catalog number. [APBC00027687]
